**Chapters** 500+ pages (380 in 2001)

- Defining Requirements
- Dry matter intake
- Energy
- Fat
- Carbohydrates
- Protein
- Minerals
- Vitamins
- Water
- Nutrient requirements of the young calf
- Growth
- Dry and transition cows
- Dairy production systems
- Dairy cattle nutrition and the environment
- Feed by-products
- Feed additives
- Agents that are toxic to dairy cattle
- Feed analysis
- Nutrient composition of feeds
- Model description and evaluation
- Nutrient requirement tables

---

---

---

**Dry Matter Intake**

Many factors affect intake

- Physical limitations
- Metabolic control
- Interaction of diet and physiological state
- Integration of signals

New Equations

- Animal factors: milk energy, BW, BCS, DIM
- Filling effects of diets
- Most accurate when both are considered

Balchem Webinar, 9/8/2021 5

5

---

---

---

---

---

---

---

---

**Dry Matter Intake**

DMI (kg/d) = [3.7 + Parity x 5.7] + 0.305 x MilkE (Mcal/d) + 0.22 x BW (kg) + (- 0.689 - 1.87 x Parity) x BCS] x [1 - (0.212 + Parity x 0.136) x e<sup>-0.055 x DIM</sup>]

DMI (kg/d) = 12.0 - 0.107 x NDF + 8.17 x ADF/NDF + 0.0253 x NDFD - 0.328 x (ADF/NDF - 0.602) x (NDFD - 48.3) + 0.225 x MY + 0.00390 x (NDFD - 48.3) x (MY - 33.1)

A) Observed DMI, kg/d

With animal and diet factors

B) Observed DMI, kg/d

NRC 2001

➢ DMI Models with only animal factors over-predicted at high DMI, and underpredicted at low DMI.

### Carbohydrates

- > 70 to 80% of diet dry matter.
- > Main source of volatile fatty acids (VFA) that can provide up to 70% of energy needs.
- > Essential for microbial protein production.

Balchem Webinar, 9/8/2021

**Dairy NRC, 2001**

TABLE 4.3 Recommended Minimum Concentrations (% of DM) of Total and Forage NDF and Recommended Minimum Concentrations (% of DM) of NFC for Herds of Lactating Cows When the Diet is Foral as a Total Mixed Ration, the Forage has Adequate Particle Size, and Ground Corn is the Predominant Starch Source<sup>a</sup>

Minimum Energy NDF <sup>b</sup>	Minimum Starch NDF <sup>c</sup>	Minimum Energy NFC <sup>d</sup>	Minimum Starch NFC <sup>e</sup>
22 <sup>f</sup>	12 <sup>f</sup>	44 <sup>f</sup>	12 <sup>f</sup>
15	27	42	15
12	52	40	20
10	31	38	20
8 <sup>g</sup>	23	38	20

Only NonFiber Carbohydrates (NFC) by difference and Neutral Detergent Fiber (NDF) were considered. Lignin or 48 h NDF in vitro digestibility was used to estimate digestibility of NDF.

---

---

---

---

**Carbohydrates**

NDF, WSC, & NDSF: carbohydrates based on solubility.

NDSF ≠ NFC  
No organic acids, by analysis, not by difference.

Recommended methods are in the Feed Analysis chapter. TSI ok for WSC.

```

  graph TD
    NDF["NDF (NDF, nNDF)"] --- Hemicellulose
    NDF --- Cellulose
    NDF --- Lignin

---

---

---

---

---

---

---

---

**NDSC**

Discussion of research findings on digestibility and ruminal impact.

**Mostly on starch**, which has the most data.\*

- Moderate substitution sugars for starch: little effect on pH.
- Based on in vitro rates: WSC&NDSF largely digested ruminally.
- Ruminal digestibility of starch: variable and affected by processing, grain type, conservation method, ration composition....
- Ruminal starch products affected by starch/forage amount.
- NDSC fermentations differ in which VFA predominate.

Balchem Webinar, 9/8/2021 14

14

---

---

---

---

---

---

---

---

**Recommendations**

Need to be based on published data.

Committee worked with what was available.

Balchem Webinar, 9/8/2021 15

15

---

---

---

---

---

---

---

---

**NDSC**

**Recommendations on formulation with NDSC?**

To give specific feeding recommendations on the different NDSC, we need more research data across more varied diets with WSC, starch, and NDSF composition, particle size, etc. reported for diets and feeds.

Balchem Webinar, 9/8/2021 16

16

---

---

---

---

---

---

---

---

**Residual Organic Matter (ROM)**

= dry matter – ash – crude protein – NDF - fatty acids – starch  
Used to calculate energy values.

Includes WSC, NDSF, organic acids, glycerol, components not in analyzed feed fractions, and analytical error.

Need more data to assess if there's need to improve.

Balchem Webinar, 9/8/2021 17

17

---

---

---

---

---

---

---

---

**NDF**

Discussion on research findings, primarily on rumen function and estimating digestion.

Ruminal NDF fermentation is affected by

- > NDF composition -- lignin
- > physical form – forage vs. nonforage
- > pH
- > retention time
- > fragility
- > rate of fermentation
- > RDP(?)
- > Entire diet
- > ...

P. J. Van Soest

Balchem Webinar, 9/8/2021 18

18

---

---

---

---

---

---

---

---

**Predicting Carbohydrate Digestion**

- **Tables:** Utility? Values are too variable.
- **Single in vitro time points:**
  - Provide important relative information.
  - In vivo digestibility affected by many more factors.
  - For NDF: May not equal in vivo, but 48 h\* was correlated with intake and milk yield.
- **Digestion & Passage:** No values for passage of nutrient fractions of individual feeds.
- **Use the measures to which your equations / model are calibrated.**

Balchem Webinar, 9/8/2021 19

19

---

---

---

---

---

---

---

---

**Physically Effective NDF**

**Physical form affects the rumen environment:**

- Enhance rumination
- Allow ruminal retention
- Maintain desirable rumen pH

➤ Forage has greater impact than nonforage NDF.

➤ Research focus.

Balchem Webinar, 9/8/2021 20

20

---

---

---

---

---

---

---

---

**Approach 1: Forage NDF**

**Formulate for forage NDF relative to dietary starch content.**

Minimum fNDF	Minimum total NDF	Maximum starch
19	25	30
18	27	28
17	29	26
16	31	24
15	33	22

Balchem Webinar, 9/8/2021 21

21

---

---

---

---

---

---

---

---

**Approach 1: Forage NDF**

**Adjustments.**

Optimal diet forage NDF concentration

15 ————— 25

- <- Higher dry matter intake
- Faster ruminal clearance rate of forage NDF ->
- Finely chopped forages ->
- Higher diet starch, lower NDF concentrations ->
- Higher diet starch degradability ->
- <- Supplemental buffers
- Grain fed separately, infrequently ->
- Limited feed bunk space, slug feeding ->
- Greater daily variation in diet composition ->

Balchem Webinar, 9/8/2021 22

22

---

---

---

---

---

---

---

---

**Approach 2: Physically Adjusted NDF (paNDF)**

- > Developed to give guidance on desired TMR particle size measurable on farm.
- > Identified factors that affected the need for or effectiveness of fiber.
- > The target ruminal pH (6.0-6.1) is a proxy for a desirable rumen environment, not a prediction.
- > Derived from 60 publications that had 241 treatment means and used an ensemble model approach.

White et al., 2017, JDS 100:9551  
White et al., 2017, JDS 100:9569

Balchem Webinar, 9/8/2021 23

23

---

---

---

---

---

---

---

---

**Approach 2: Physically Adjusted NDF (paNDF)**

**Inputs:**

- > Diet characteristics, % of dry matter
  - Forage NDF, total forage, wet forage
  - Cottonseed: whole, hulls, meal
  - NDF, ADF, CP, starch
- > Body weight
- > Penn State Particle Separator (PSPS)
  - % of TMR DM on 19 mm sieve (1.18 optional)

**Output predictions:**

- > Recommended % of TMR DM on 8 mm sieve
- > Minutes per day of rumination

Balchem Webinar, 9/8/2021 24

24

---

---

---

---

---

---

---

---

**Approach 2: Physically Adjusted NDF (paNDF)**

No dataset has complete or balanced coverage of all key independent variables.

**Ensemble Model Approach**

- Technique that takes a core concept (i.e. rumen pH) and converts it into a "constellation" of models.
- Integrates equations with weighting factors over a range of conditions will be better at "future prediction".
- Particularly useful where minimal data or that from diverse research studies are available for equation development.

Balchem Webinar, 9/8/2021 25

25

---

---

---

---

---

---

---

---

**Approach 2: Physically Adjusted NDF (paNDF)**

Ensemble models aggregate predictions from multiple different models to yield a mean and range of responses.

Compared to individual models, gives more reliable predictions of events, confidence intervals, and is less likely to generate systematic errors.

White et al. 2017. JDS 100:9551

Balchem Webinar, 9/8/2021 26

26

---

---

---

---

---

---

---

---

**paNDF**

Ensemble model:  
**Fixed factors, % of DM:**  
 Starch: 15-32.5%  
 ForageNDF: 10-30%  
 on 19 mm sieve: 6-18%

**Response, % of DM:**  
 on 8 mm sieve.  
 Black line is prediction,  
 gray is min/max range of prediction.

Balchem Webinar, 9/8/2021 27

27

---

---

---

---

---

---

---

---

**Approach 2: Physically Adjusted NDF (paNDF)**

Not feasible to give tables or equations of all possible permutations.

paNDF app available free of charge at Google Play and App Store: "Munch for Dairy Cows"

Feed Item	Value
1.5% DM	11.12 0%
1.5% DM	11.12 0%
DM ADP	11.12 0%
DM ADP	11.12 0%
DM CP	11.12 0%
DM DM	11.12 0%
DM DM	11.12 0%
